

ENERGY GUIDE FOR ASPHALT MIX PLANTS

How to use the guide to help your organization improve

The [ENERGY STAR Energy Guide for Asphalt Mixture Production](#) contains over 50 opportunities to save energy and money in mix operations and reduce the embodied carbon of your products.

To get the most out of the guide, consider the activities below. Download the guide at www.energystar.gov/asphaltmixguide.

SEND EMAIL

with the link to guide mix plant managers and other stakeholders including staff from operations, EHS, facilities, & sustainability.

SCHEDULE MEETING

with staff or plant operators to review the guide and identify the top opportunities in their plants.

USE IN TRAINING

Make the entire guide, or select chapters, required readings when training new staff.

POST ON INTRANET

or other internal company platforms.

SHARE WITH SUPPLIERS

and ask for their support in scoping opportunities from the guide in your mix plants.

INCORPORATE IN BMPS

Incorporate checklists in organizational best management practices, shutdown plans, etc.

CONDUCT GAP ANALYSIS

Have staff identify equipment and practices being used and not being used from the Treasure Map found in the guide (page 34).

INFORM CAPITAL PLANNING

Review the guide during budgeting season to identify capital improvement projects.

Tell us how you used the guide or share what you did to increase efficiency by emailing energystrategy@energystar.gov.
